

# ELEPHANT TOOTHPASTE

## HOW DOES IT WORK?

*Enzymes in the yeast break-down the hydrogen peroxide and releases oxygen....*

*.....the oxygen forms lots of bubbles with the soap*

*...and makes a foam that looks like toothpaste!  
Just don't put it in your mouth!*

### TRY IT YOURSELF!

- ½ cup 6% hydrogen peroxide liquid
- 1 Tablespoon of dry yeast
- 3 Tablespoons of warm water
- Washing-up liquid & Food colouring  
(Adult supervision required!)
